# Usage Precautions

## 1. Plugs

### 1. Mating/Unmating

- (1) To disconnect the connector, insert the extraction tool (H.FL-LP-N) under the connector flange. Pull in a perpendicular direction in line with the connector's mating axis. Do not unmate the plug by pulling on the cable, this can damage the connector performance.
- (2) When mating, align the mating axes between the receptacle and cable assembly, and insert the cable assembly downward and perpendicular into the receptacle. Do not insert the cable assembly at a slanted angle.

### 2. Tolerable load to a cable after mating

Once the connector has been mated do not apply forces exceeding the values in the diagram below.

### 3. Precautions

Do not use excessive prying to mate or un-mate the connectors as it may lead to damage.

## 2. Receptacles

<p>(1) Recommended Reflow Temperature Profile</p>	<p>1. Temperature refers to the temperature of the PCB surface at the terminal leads.                  2. Reflow soldering should be performed at a printed circuit surface temperature of 250°C Max.                  3. The temperature profile may vary depending on board size, solder used and solder thickness.</p>
<p>(2) Recommended Manual Soldering Conditions</p>	<p>Manual soldering : 350°C for 5 seconds</p>
<p>(3) Recommended Metal Mask Thickness</p>	<p>0.1mm to 0.15mm</p>
<p>(4) Reflow Cycles</p>	<p>2 times</p>
