BM56 Series

0.35mm Pitch, 2.2mm Width, 0.6mm Stacking Height, Multi-RF Compatible FPC-to-Board Connector
Features

1. Compact, Multi-RF capable FPC Connector, World’s Smallest Width Class

Pitch: 0.35mm, Width: 2.2mm, Stacking Height: 0.6mm

2. Contact Design Ideal for Both Digital and RF Signal

3. Superior RF Signal Transmission

V.S.W.R.
DC to 1GHz: 1.2 Max.
1 to 6GHz: 1.3 Max.
6 to 20GHz: 1.5 Max

4. Double Shield Enhances EMI Prevention

Good EMI Resistance
5. Robust Mating Guides

6. Halogen-free

No chlorine or bromine exceeding the standard values are used in this connector.
In accordance with IEC 61249-2-21
Br : 900ppm max, Cl : 900ppm max, Br+Cl : 1500ppm max

Applications

Devices that require low-profile, compact design such as smartphones, wearable terminals and tablet PCs.
### Product Specifications

<td>Hand solde : Solder iron temperature of 350°C for 3 seconds Max.</td>
</tr>
</tbody>
</table>

Note 1: Includes temperature rise caused by current flow.
Note 2: Use without condensation.
Note 3: Storage refers to long-term storage of unused items before they are mounted on the PCB. Operating temperature and humidity range apply when the product is not powered after PCB mounting and when temporarily stored during transportation.

# Usage Precautions

## Recommended Temperature Profile

![Temperature Profile Graph]

### Conditions
1. Peak Temperature: 250°C
2. Heating: 220°C min. for 60 sec. max.
3. Preheating: 150 to 180°C, 90 to 120 sec.
4. Number of Reflow Cycles: 2 cycles max.

### Notes
- **Note 1:** Temperature refers to the surface temperature of the board near the connector lead.
- **Note 2:** When using nitrogen reflow, oxygen concentration must be 1000 [ppm] or more for mounting. If it is less than 1000 [ppm], please contact a Hirose representative.

## Recommended Manual Soldering Conditions
- Soldering iron temperature: 340 ± 10°C
- Soldering time: within 3 seconds

## Recommended Metal Mask Thickness and Open Area to PCB Pattern Area Ratio
- Thickness: 0.08mm
- Aperture Ratio: Header Side: 100%, Receptacle Side: 100%

## Board Warpage
- Max. of 0.02mm at the center in reference to both ends of the connector

## Cleaning
- Cleaning is not recommended.
- If you clean this product, please evaluate its performance before using it.
- (Cleaning may impair the mating/unmating properties and lower resistance to environmental factors.)

## Precautions
- Be careful when mating/unmating the connector when it is not mounted on the PCB as it may cause damage/deformation to contacts.
- Avoid supporting the PCB only with the connectors.
- Support it by other means such as bolts, screws, posts, etc.
- Excessive prying during unmating/mating may result in damage.
- In the case of hand soldering, please do not apply any flux which could cause flux wicking.
- This product may have slight color differences due to production lot variability, but this does not affect the performance.
- Please refer to the following page for handling precautions when inserting and removing.
- Because the product can disengage if dropped (or other impact), or by FPC routing, it is advised to secure the mated connectors to the board with housings and cushioning materials.
- Do not use the connector in non-recommended conditions (i.e., rated current, rated voltage, PCB design and operating environment, etc.). Such usage could lead to material outgassing, ignition, or short-circuit, etc.
- Refer to the specifications and guidelines for board pattern dimensions, board cautions, and connector treatment.
- Please contact Hirose if connector usage in conditions other than those described in the specifications and the guidelines is being considered.
Connector Handling Precautions

【Mating Disengagement Prevention】

Please use cushioning.
This connector may come off due to impact such as dropping.
Cushioning should be large enough to cover the entire connector.

【Mating Method】

1. Locate the guide port and align. This product has a guide rib on the header to ensure proper engagement.
   Align the connector so that it is in this position.

2. Once aligned, the connector engages. You can feel the mated height of the connector lower.

Move the connector forward and backward, left and right to find the guide port.

The mated height lowers to the perfect mated condition.
3. In the engaged state, the connectors are parallel to each other, and the connectors cannot move forward, backward, left, or right. Complete mating from this state.

4. Check that mating is completed.
   If one side is floating, or if it is mated at a diagonal, remove and re-mate.
[Handling Precautions for Connector Removal]

1. When removing the connector, it is preferable to pull it out in the upward direction from the connector mounting surface. However, when removing the FPC from the circuit board it becomes more difficult to remove it vertically with higher pin counts and thin FPCs.

2. If difficult to remove, extract the connector diagonally in the direction of the pitch. Note that removal from the widthwise side will apply a large load to the contacts. When removing from the width direction, pull the end of the FPC in the upward direction. (When a force is applied in the horizontal direction, a large load is applied to the contact.)

3. If the FPC does not have sufficient rigidity, solder stripping or connector breakage may occur. Please use it after checking the repetitive operation with a flexible board in advance, such as during a trial manufacture run. Refrain from holding the corner of the flexible board and removing it diagonally as it will result in a large load to the contacts.

While Taking into Consideration

Specifications mentioned in this catalog are reference values. When considering to order or use this product, please confirm the Drawing and Product Specifications sheets. Use an appropriate cable when using the connector in combination with cables. If considering usage of a non-specified cable, please contact your sales representative. If assembly process is done by jigs & tools which are not identified by Hirose, assurance will not be given. If considering usage for below mentioned applications, please contact your sales representative. In cases where the application will demand a high level of reliability, such as automotive, medical instruments, public infrastructure, aerospace/defence etc. Hirose must review before assurance of reliability can be given.
