Crimping System

1. Insertion of Heat Shrink Tube and Crimping Sleeve

Insert the heat-shrink tube and crimping sleeve into the cable as shown.

Note : The heat shrink tube may be cable jacket. In the case of cable jacket, insert it so that the thicker side is on the connector side.

2. Cable Terminal Processing

Terminal processing is performed as shown in the figure. Dimensions are as shown in the table below.

Part No.	A	B	C
UM-QP-1.5VCR3A(40)	1.5	9.8 ± 0.2	5 ± 0.2

Note : The outer and center conductors of the cable shall not be damaged.

3. Soldering of the Center Contact

- (1) A preliminary solder is applied to the solder hole of the center contact.
- (2) A cable center conductor is inserted into the solder hole and soldered.

Note 1 : Be careful not to melt the cable insulation.

Note 2 : Remove excess solder with a knife, etc. If there is excess solder, the center contact may not be fully inserted into the connector body.

4. Insert the Cable into the Connector Body

- (1) The cable insertion is completed when the tip of the center contact coincides with the end face A of the connector insulator.
- (2) Be careful not to allow the cable braid to enter the connector.

5. Crimping Sleeve

- (1) Move the crimping sleeve to the position shown.
- (2) Crimp with the special tool shown in the table below.

Part No.	Specialized Tool Part No. and Hole
UM-QP-1.5VCR3A(40)	HT303/UM.MSS-T-1 (1.5 holes)
