

ZH05 Series

0.5mm Size, 2mm Pitch, Wire-to-Board Connector with Short-Circuit/Electric Shock Prevention Design

Finger Protect

Space Saving

Contact Reliability

NEW

Features

1. Compact and narrow width

0.5mm terminal tab size, 2mm pitch.
Space-saving design that contributes to size reduction of end product.

2. Short-circuit/electric shock prevention design

Female terminals are used on the board side receptacle, and live parts are completely covered with resin, enhancing assembly safety.

Receptacle/Cross-Section

The female terminals are enclosed in highly insulating resin.

Eliminates two risks

- Board damage due to a short circuit between adjacent terminals
- Operator electric shock from touching the contacts

3. High Heat Resistance up to 125°C

125°C heat resistance (Note) make ZH05 ideal for applications requiring high heat resistance such as automotive.

(Note) Includes temperature rise due to current flow.

4. High Vibration Resistance

The female terminal has an original 3-point contact design and double-layered spring. ZH05 achieves stable contact even under intense vibration and contributes to enhanced reliability.

High Vibration Resistance Terminal Design

5. Suitable for Potting

The receptacle minimizes clearance of the press-fit contact area and prevents potting from flowing to the contact point.

Potting Resin Inflow Prevention Design

6. Two types of mating keys : A and B

Prevents misfitting when using multiple devices.
