Notes (5) The derating curve is derived from the basic curve multiplied by the derating factor of 0.8.

(6) The value of rated current varies with the ambient temperature.

It is recommended to use the product within the derating curve zone.

(7) The measurement method of the derating curve is shown below.

- Test specimen: This product, unused prior to testing.
  - Test cable conductor cross sectional area : Power···AWG#14 (2.0mm<sup>2</sup>), Signal···AWG#22 (0.3mm<sup>2</sup>)
  - Test condition: Power supplied while the specimen is in a stationary state and then measured.
- (For details, please refer to the examination report number TR140E-20045.)
