1. Scope

This document specifies the process from crimping the DF60-series crimped terminals to cables to inserting the terminals to crimping sockets and in-line plugs.

2. Process for harnessing

3

2.1. Cable stripping

Strip cables in accordance with Crimping Quality Standards (ETAD-H0519/0647/0747/0797/ 1042).

In so doing, make sure there is no scratch on cable cores.

3 2.2. Crimping

Crimp terminals to cables using an applicator (AP105-DF60-8 or AP105-DF60-1012 or AP105-DF60S-8S or AP105-DF60S-1012S),

and check the crimping height and shape in accordance with the Table of crimping conditions and Crimping Quality Standards (ETAD-H0519/0647/0747/0797/1042).

In the case of using a cabtyre cable, etc., perform crimping so that the terminal insertion direction is correct when it is inserted into the crimping socket.

3 *DF60F (finger protection type)

To support finger protection, attach the heat-shrinkable tube. However, when using DF60S-8SC(F)A(##), heat-shrinkable tube is optional.

Specification of heat-shrinkable tube

Target crimp terminal : DF60-8SC(F)A(##), DF60-1012SC(F)A(##) DF60-8PC(F)A(##), DF60-1012PC(F)A(##)

Name of	Before shrinkage (mm)		After shrinkage		Rated	Rated	
product			(mm)		voltage	temperature	
	Inside	Thickness	Inside	Thickness	(V)	(°C)	
	diameter		diameter				
SUMITUBE	Φ8.4±0.4	0.25	Φ4.0	0.56	600	125	
F2(Z) 8X0.25	Ψ0.4±0.4	0.25	Ψ4.0	0.50	000	125	

Target crimp terminal : DF60S-8SC(F)A(##), DF60S-1012SC(F)A(##)

When installing a tube after crimping, the recommended tube differs for each cable size only for the right-angle type. The recommended tube differs for each cable size only for the right-angle type. Please see below.

	Name of	Before shrinkage (mm)		After shrinkage (mm)		Rated	Rated
	product	Inner	Thickness			voltage	temperature
	!	diameter		diameter		(V)	(°C)
AWG8-12	SUMITUBE		!	1		'	
(Before	F2(Z) 8X0.25	Φ8.4±0.4	0.25	Φ4.0	0.56	600	125
crimping)	!					<u> </u>	
AWG8	SUMITUBE						
(After	F4(Z) 1/2inch	Φ 13.2±0.5	0.15	Φ6.4	0.28	300	125
crimping)	<u>ا</u>	'			!		l
AWG10-12	SUMITUBE						
(After	F2(Z) 14X0.3	Φ 14.5±0.4	0.30	Φ7.0	0.69	600	125
crimping)		'				<u> </u> '	

*If the recommended tube cannot be used, select the tube that meets the following requirements.

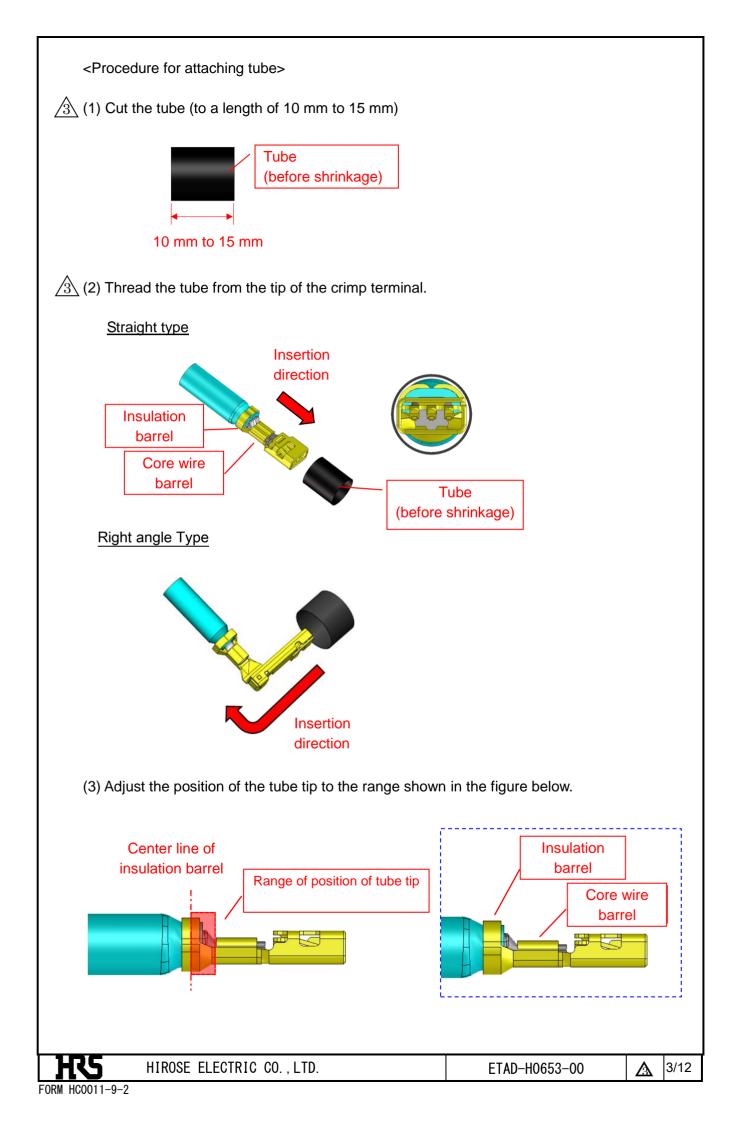

Rated temperature: 105°C or more Inner diameter before shrinkage: Recommended tube or higher Inner diameter after shrinkage: Less than or equal to the outer diameter of the sheath of the cable to be used Thickness after shrinkage: Below recommended tube

2.3. Insert crimped terminal to socket

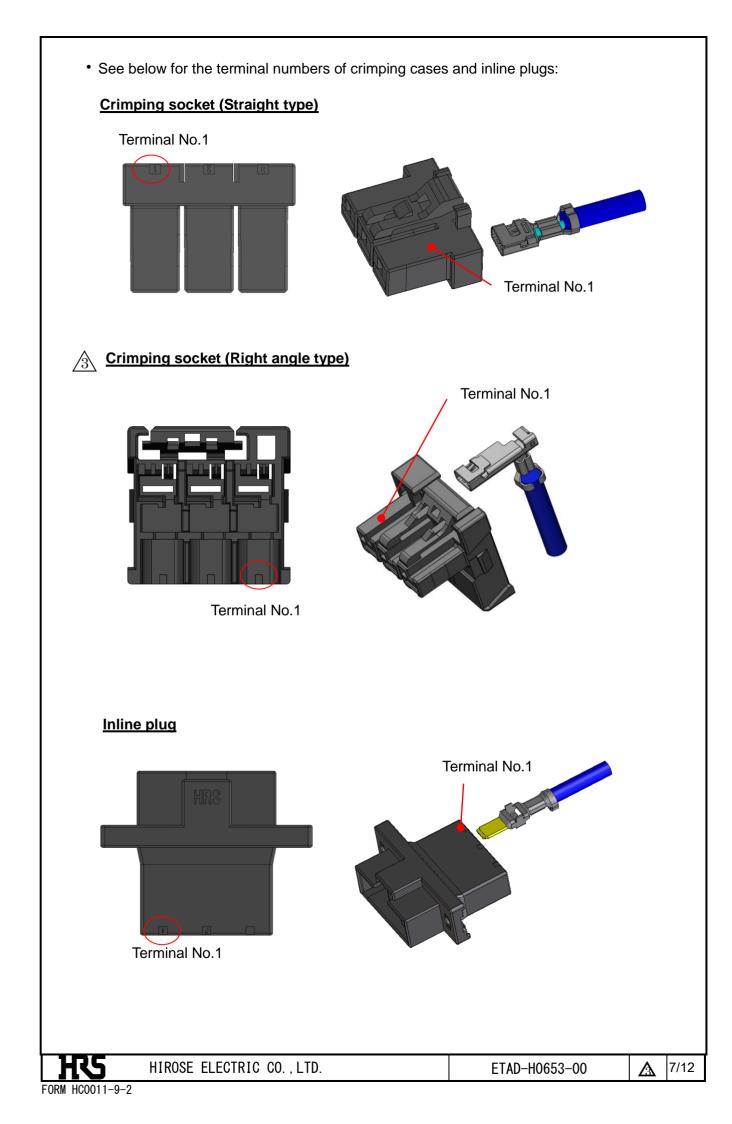

Hold the cable of a crimped terminal, and insert it to each terminal hole of crimping sockets and inline plugs.

*The figures show insertion to DF60-3S-10.16C and DF60-3EP-10.16C.

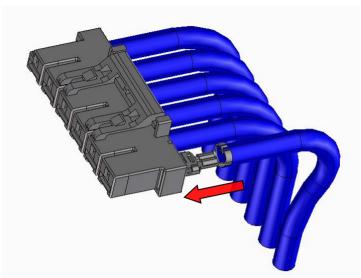

For insertion, place the crimped terminal lance and crimping case lock in the following direction:

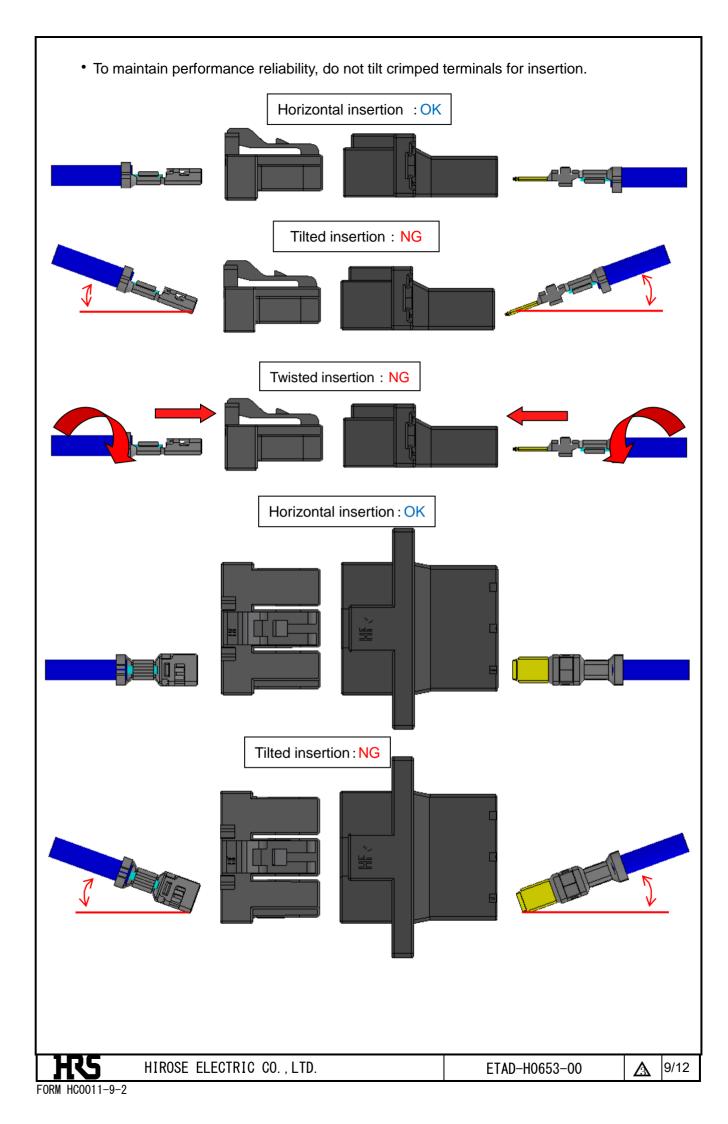

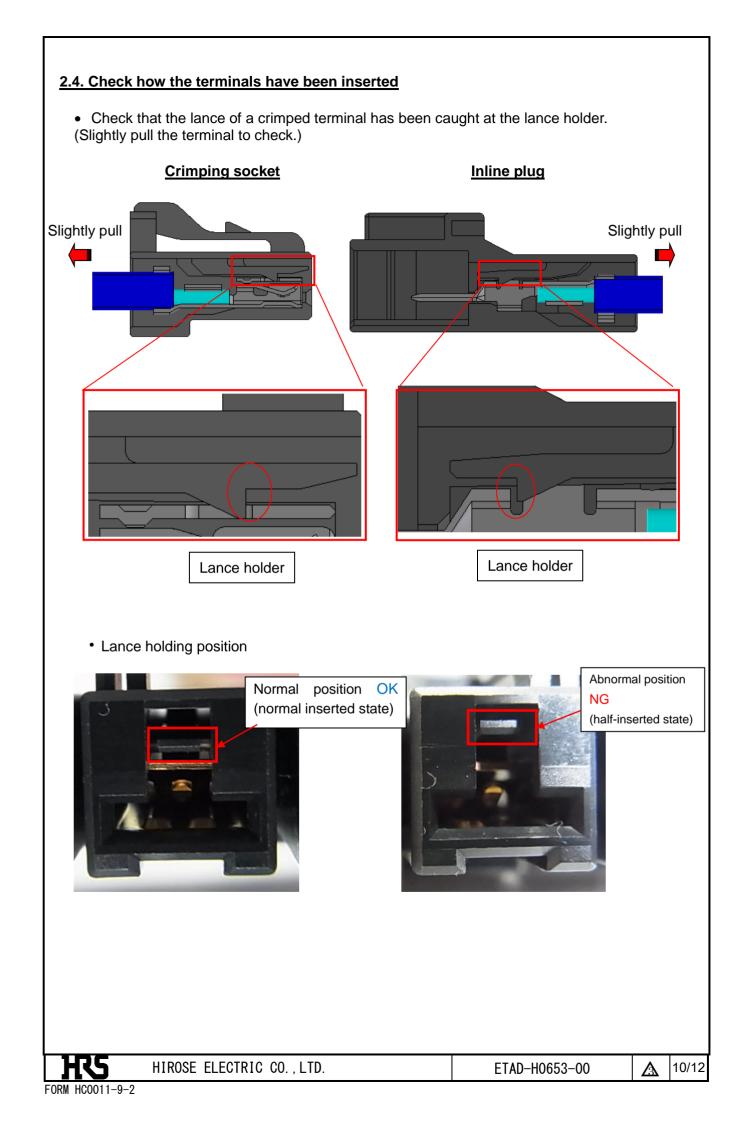

• How to insert cables into multipole terminal The insertion of cables in a bended state allows users to carry out the operation without any difficulty as shown in the drawing below.

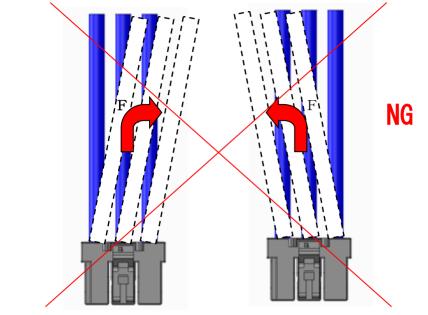

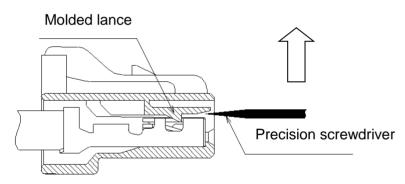

*Prohibited matters when checking terminal insertion When checking the terminal insertion state, please do not bend the cables as shown in the drawing below. Each of these cables has a thick core wire which is not very supple, and therefore, failure to observe this prohibition may apply stress to the connectors, which may cause the terminals to be disconnected.

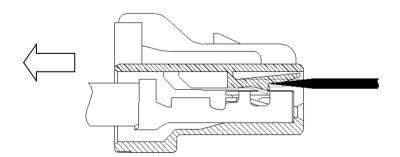

3. Removing contacts

1. Lift up molded lance by using precision screwdriver

2. After lance is released from terminal, pull the cable and remove terminal from housing

By doing repairs, the lance strength could be lower; therefore, do not reuse the crimp socket and the inline plug, simply replace them with new ones.

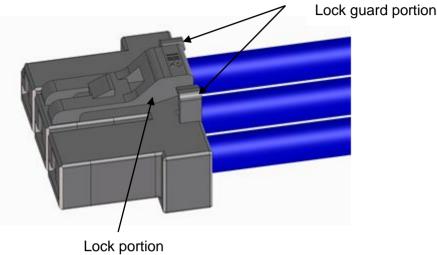

4. Precautions for handling

*Packing and storage

For packaging and storage of cable assemblies, please consider not to apply excessive force to the lock portion by its own weight.

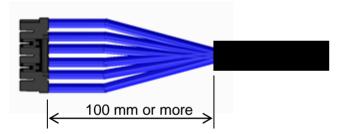

Applying excessive force to the lock and the lock guard portion could cause damage.

Long term storage under hot and humid condition could cause deformation of the lock portion and result in mating failure.

• Cable tying/Cabtyre cable stripping length

- Tying the cables near the socket may cause terminal disconnection, cable cut, unstable contact, etc. Thus, it is recommended to tie and strip the cables at a point at least 100 mm from the socket.

When using a multipole terminal, be aware that the strip length for the outside cables should be longer to provide it with a flection portion, as well as to not apply any load such as excessive torsion.
